Environmentally friendly paint job gains attention

By Megan Rutherford

The hotel at 445 S. Alvernon Way was showing its 30 years, so owners sought out Ecological Paint® and its non-toxic, carcinogen-free products as part of an extensive face-lift.

Before

- 0% VOC's and not sticky.
- Hideriffic Technology.
- Splatter free.
- Netonian Rheology.
- Water cleanup.
- Kid friendly.
- No known carcinogens.
- Greater adherence.
- Cost efficient.
- Rapid drying.
- Hypo-allergenic.
- Virtually odorless.
- Greater opacity; therefore fewer coats required.

After

Following a splash of a paint designed as heat-retardant and energy reducing, utility bills have dropped at a noticeable level and the boldness of the paint has attracted more clients.

* Doubletree hotel used Orange, Purple and red in their project.
Pigmented paint CONTINUES to contain lead today. Ours doesn't.
